

Cachendo provides integrated, end-to-end technology consulting, from strategy through implementation. As trusted advisors to government and commercial clients, Cachendo offers expert guidance on complex IT projects requiring keen insight, innovative thinking and commitment to performance.

RJC Designs provided consulting, designs and engineering services for Cachendo's new facility in Arlington Virginia. Utilizing the latest in digital and display technology RJC provided designs for audio / video, communications, and control programming. RJC also provided system and device coordination with the client, architect, and developer for a seamless integration of technology and facility.

Multi-point information displays and related technology along with local display and world communications must work flawlessly and in tandem in order to provide accurate and up to date critical information.

AMX Control Panel enables users to select the desired display configuration necessary to view the source information

The large training room uses multiple projection display configurations. This allows the room to be used for smaller collaborative groups or as one large instructional environment.

The communications and media lab allows for instructor and student interaction

Strategy and Conference Room utilizes computer and various media inputs along with conferencing capabilities. Viewing of operations can also be done through electronic privacy glass.

Development and Operations Overflow Room utilizes multiple screens which can view the various display outputs of the OPS center's video display wall.
